

Changes to Argus US products distillates data (date to be confirmed)

Following the announcement (below) in the Argus US products report, the following new distillate data codes are expected to be launched in the near future.

New Diesel Assessments:

Argus seeks to publish prices that can be intelligently assessed on the basis of done deals or on the basis of actively discussed spreads between common grades or locations. At this juncture, the industry has not begun to trade the new diesel grades in any market centre. As trade emerges, Argus will list assessments.

Argus fully expects that it will be able to list prices for Ultra Low Sulphur Diesel (ULSD) in New York and following the Colonial loading schedule on the Gulf Coast. The specification assessed will be the prevailing grade at the relevant market centre, which is likely to be 8ppm max sulphur for pipelines and 15ppm max for waterborne and barges. Argus also expects that it will be able to continue its existing Low Sulphur Diesel assessments in most centres, and will redefine that assessment to reflect on-road and prevailing market specifications.

The information below has no confirmed start date these will be announced on a case by case basis as the series appear in the report. In addition the differential basis is currently assumed to be Nymex No 2 Fuel Oil, if this changes, then this will also be announced as and when the series start.

The purpose of this email is to prepare data clients for these forthcoming new distillate data series.

New series data codes, Argus CSV format (PA codes)

PA Code	Description	Time Stamp	Price Type	Continuous Forward	Start Date	Differential Basis *
PA0004080	Diesel 15ppm NYH barge	3	1	0	tbc	Nymex No 2
