

Earlier availability of Argus US products assessments effective 28 August 2006

In response to client requests, some of the Argus US products data will be available earlier in the day. The details are described below for both legacy G-code data series and the new PA-code CSV files. In the days before launch the files may be available as part of ongoing Argus testing, these files should be ignored until the launch date.

Legacy Argus G-code data series

Old style Argus data files containing legacy Argus "g-codes" data as published on <ftp.petroleumargus.com>, <ftp2.petroleumargus.com> and <ftp3.petroleumargus.com> in the /DATA/DHP folders with the following names:-

yyyyymmdddhpa.txt where yyyy is year value, mm is month value and dd is date value
latestdhp.txt a single file over written

These files will now be posted as soon as possible between 5pm Houston time (11pm London time) and at latest by 5.30pm Houston time and then overwritten at approximately 8pm Houston time (2am London time) with the current complete data set. Clients not requiring this data early can continue to leave existing download proceeds as they are currently set with no changes. Clients requiring an earlier feed of data should run an additional download shortly after 5.30pm Houston time to process the earlier data and then run the existing download to take the complete data set, note the later file will contain the full data from the earlier file plus all the remaining data expected for that day.

The early (5.30pm) data set will contain the following data series, the later data series will remain exactly as it currently is (and therefore its not detailed in this announcement).

New style Argus PA-code data in CSV format

This data is available on the ftp.argusmediagroup.com site in the /DUSPR folder. The process is similar to above, an earlier data set will be created between 5 and 5.30pm Houston time (11-11.30pm London time) and will NOT be over written by the later file, a second (the current) data file will be created with a full data set.

The file names are:-

Early file

yyyyymmddhpa.csv where yyyy is year value, mm is month value and dd is date value for the 5.30pm data file

latestdhpa.txt a single file over written each day

Late file

yyyyymmddhdp.csv where yyyy is year value, mm is month value and dd is date value for the 8pm data file

latestdhp.txt a single file over written each day

Clients not requiring this data early can continue to leave existing download proceeds as they are currently set with no changes. Clients requiring an earlier feed of data should run an additional download shortly after 5.30pm Houston time to process the new earlier data (called dhca) and then run the existing download to take the complete data set, note the later file will contain the full data from the earlier file plus all the remaining data expected for that day.

The early (5.30pm) data set will contain the following data series, the later data series will remain exactly as it currently is (and therefore its not detailed in this announcement).
