

Change to Argus International Crude data feed effective 19 September 2006

Due to continual late availability of the Ice Bwave values for front, second and third months forward, Argus will publish these Bwave values in the report and data feed of the following day, until further notice. The Saudi formula base value is also being moved as it dependent on the Ice Bwave values.

Therefore the following data codes are being moved from the DHC (US crude data module) to the DLC (European crude data module). Note these data points will have a different date (they will be earlier) than the main data set in each module.

The codes being moved are:-

G-code	PA-code	Time stamp	Price type	Continuous forward	Description	Start Date	End Date
GCSFBAS0U	PA0000208	9	5	1	Saudi formula base month	01/03/2000	
GCIPBWM3U	PA0002658	9	5	3	Ice Brent (BWave 1) month	31/03/2003	
GCIPBWM2U	PA0002658	9	5	2	Ice Brent (BWave 1) month	31/03/2003	
GCIPBWM1U	PA0002658	9	5	1	Ice Brent (BWave 1) month	31/03/2003
