# CORRECTION Changes to Argus Americas Crude and Argus Crude effective today (25 July 2007)

In response to client demand,  Argus is adding a Month To Date (MTD) average for the existing front month WTI formula basis assessment already carried.

This means that the legacy G-code data feed will have one new series:-

| Code | TimeStamp | Description | PriceType | Start Date | End Date |
|---|---|---|---|---|---|
| GCMAWTI1M | NOTIME | ARGUS, WTI FORMULA BASIS, MTD AVERAGE, MONTH 1 | Midpoint | 24 Jul 2007 | ACTIVE |
| **GCMAWTI2M** | **NOTIME** | **ARGUS, WTI FORMULA BASIS, MTD AVERAGE, MONTH 2** | **Midpoint** | **24 Jul 2007** | **ACTIVE** |

And the newer style CSV files (both the older v2 and current v3 CSV files) will have these additional series:-

| G-code | PA-code | Description | Time stamp | Price type | Continuous forward | Start date | End date |
|---|---|---|---|---|---|---|---|
| GCMAWTI1M | PA0004636 | WTI Formula Basis MTD month | 0 | 8 | 1 | 24 Jul 2007 | |
| **GCMAWTI2M** | **PA0004636** | **WTI Formula Basis MTD month** | **0** | **8** | **2** | **24 Jul 2007** | |

## CORRECTION NOTE

**Argus will not be introducing the second month WTI formula basis MTD month series, apologies for the inconvenience this may have caused.**
