

Argus brings forward filing time for US Products price data, effective 29 September 2008

Argus is bringing forward the release time for many of its US products assessments. Below is a complete list of market assessments that will be available from Argus at 5:00pm CST. Assessments in italics have been recently brought forward to the 5:00pm CST file.

All assessments available in the 5:00pm CST file are prompt. Forward products markets, west coast and feedstocks are available in our final datafile at 6:30pm CST. The 6:30pm file was previously available at 8:00pm CST, and this is the final datafile containing all US Products assessments.

The Argus methodology for US products markets remains the same, an assessment of trade over the entire trading day. The earlier price data availability does not affect the time frame covered by the assessments.

New York Delivered Waterborne
