

Changes to Argus Documentation effective 30 September 2019

Argus is adding an extra column to latestCodes.csv and latestDoc.csv documentation files as well as the V_CODE metatable provided via web service. The column is named "Specification" and of the string type (VARCHAR2(200)). This will be added as the last column of the data set. The purpose of the field is to provide extra information on the specification of the grade associated to the code.

Samples of the documentation files with the new field added are available upon request.
